

From: Rob Dorrell, University of Hull, 25/10/19

Subject: PhD in Microplastic Transport

The Energy and Environment Institute, University of Hull, is welcoming applicants to a PhD on microplastic transport by environmental flows. Research will develop new theoretical models to describe the transport of variable buoyancy particles, which will be validated against new data developed from laboratory-controlled physical experiments.

Prospective students with interests in these fields are encouraged to contact Rob Dorrell (r.dorrell@hull.ac.uk) for more information, and to visit <https://www.hull.ac.uk/study/pgr/phd/funded/microplastic-transport.aspx> for details on how to apply by the 13th December deadline.
